

# Admiral

UK

Refreshing  
Tea  
Fruit tea  
Ripe kiwi  
Lemony

This hop variety from Wye in Kent was bred with the goal of expanding the varietal range. In terms of the alpha acid content, it matures about one week earlier than average and has considerably better yields in terms of alpha acid per hectare than other hops in its class. Admiral is characterised by strong growth characteristics. Its small compact cones make harvesting easy. Admiral's tolerance to wilt is similar to the UK variety Progress and it has very good storage stability.

## Analytical values

Type	High Alpha
Growing Area	UK
Lineage	It was bred from Challenger and Northdown
$\alpha$ -acids*	13.0 - 16.0 %
$\beta$ -acids	4.8 - 6.1 %
Total Polyphenols	No data
Total oils	1.0 - 1.7 ml/100g
Myrcene	39.0 - 48.0 % of total
Linalool	app. 1.0 % of total

The analytical values are typical for the variety at the time of harvest, but may vary according to crop year, growing region, grower and degree of ageing.

\*The alpha content is determined by means of spectrophotometric analyses.
