

# Galena

USA

Lime  
Gooseberry  
Brandy  
Pear  
Pineapple

Galena was developed within the framework of the state of Idaho's hop breeding programme and was released as a variety in 1978. Galena is the ancient Roman term for the mineral galenite, which is present in Oregon's soil. The female parent variety is Brewers Gold. The outstanding features of Galena, the mildest of the high alpha varieties, are its relatively high beta content and its storage stability, which is almost as good as that of Cluster.

## Analytical values

Type	High Alpha
Growing Area	USA
Lineage	Daughter of Brewers Gold
$\alpha$ -acids*	11.5 - 13.5 %
$\beta$ -acids	7.2 - 8.7 %
Total Polyphenols	No data
Total oils	0.9 - 1.3 ml/100g
Myrcene	55.0 - 60.0 % of total
Linalool	No data

The analytical values are typical for the variety at the time of harvest, but may vary according to crop year, growing region, grower and degree of ageing.

\*The alpha content is determined by means of spectrophotometric analyses.
