

Willamette

USA

Citrus
Incense
Elderberry
Caramel
Curry

Named after the valley of the same name in northeast Oregon, Willamette is a daughter of Fuggles and was developed as part of the USDA breeding programme in Oregon. It was released as a US aroma variety in 1976. This cultivar is characterised by its low alpha content and a mild aroma that has a fundamental similarity to that of Fuggles. Although Willamette is more difficult to grow than most hop varieties, it is widely planted in all US growing regions.

Analytical values

Type	Aroma
Growing Area	USA
Lineage	Daughter of Fuggle
α -acids*	4.0 - 6.0 %
β -acids	3.5 - 4.5 %
Total Polyphenols	No data
Total oils	1.0 - 1.5 ml/100g
Myrcene	30.0 - 40.0 % of total
Linalool	No data

The analytical values are typical for the variety at the time of harvest, but may vary according to crop year, growing region, grower and degree of ageing.

*The alpha content is determined by means of spectrophotometric analyses.
